

## DIGITAL SIGNAGE JOHNSON CONTROLS INTERACTIVE TOUCH SCREEN KIOSK

Create a stronger impression with visitors.

Fullhouse worked with Johnson Controls to provide them with an interactive touch screen kiosk to showcase the sustainable building technologies at the newly renovated Johnson Controls corporate campus. The content presented on the kiosk educates clients on how Johnson Controls offerings support the process to obtain LEED certification. It also uses live data feeds to display near-real time data from Johnson Controls building systems.

The kiosk was built to enable quick content updates and can be easily adapted for use by other organizations to showcase their facility and sustainable building practices.

The touch screen had a much bigger impact than what a static display would have offered. So much so, Johnson Controls took the kiosk on the road with them to showcase at various tradeshow.
